

Video Entertainment Systems (FS-VE 010)

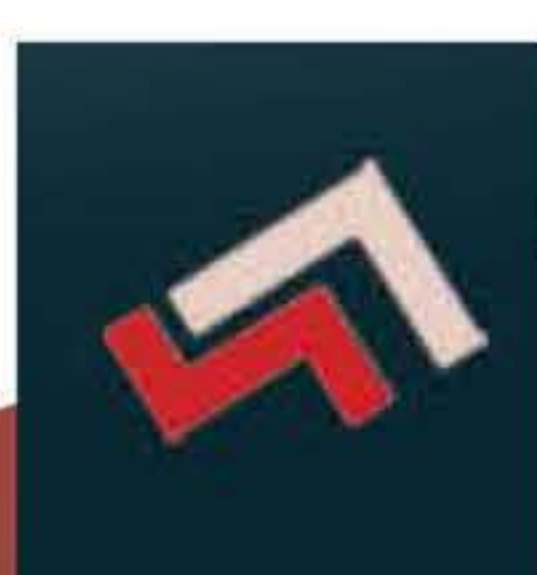

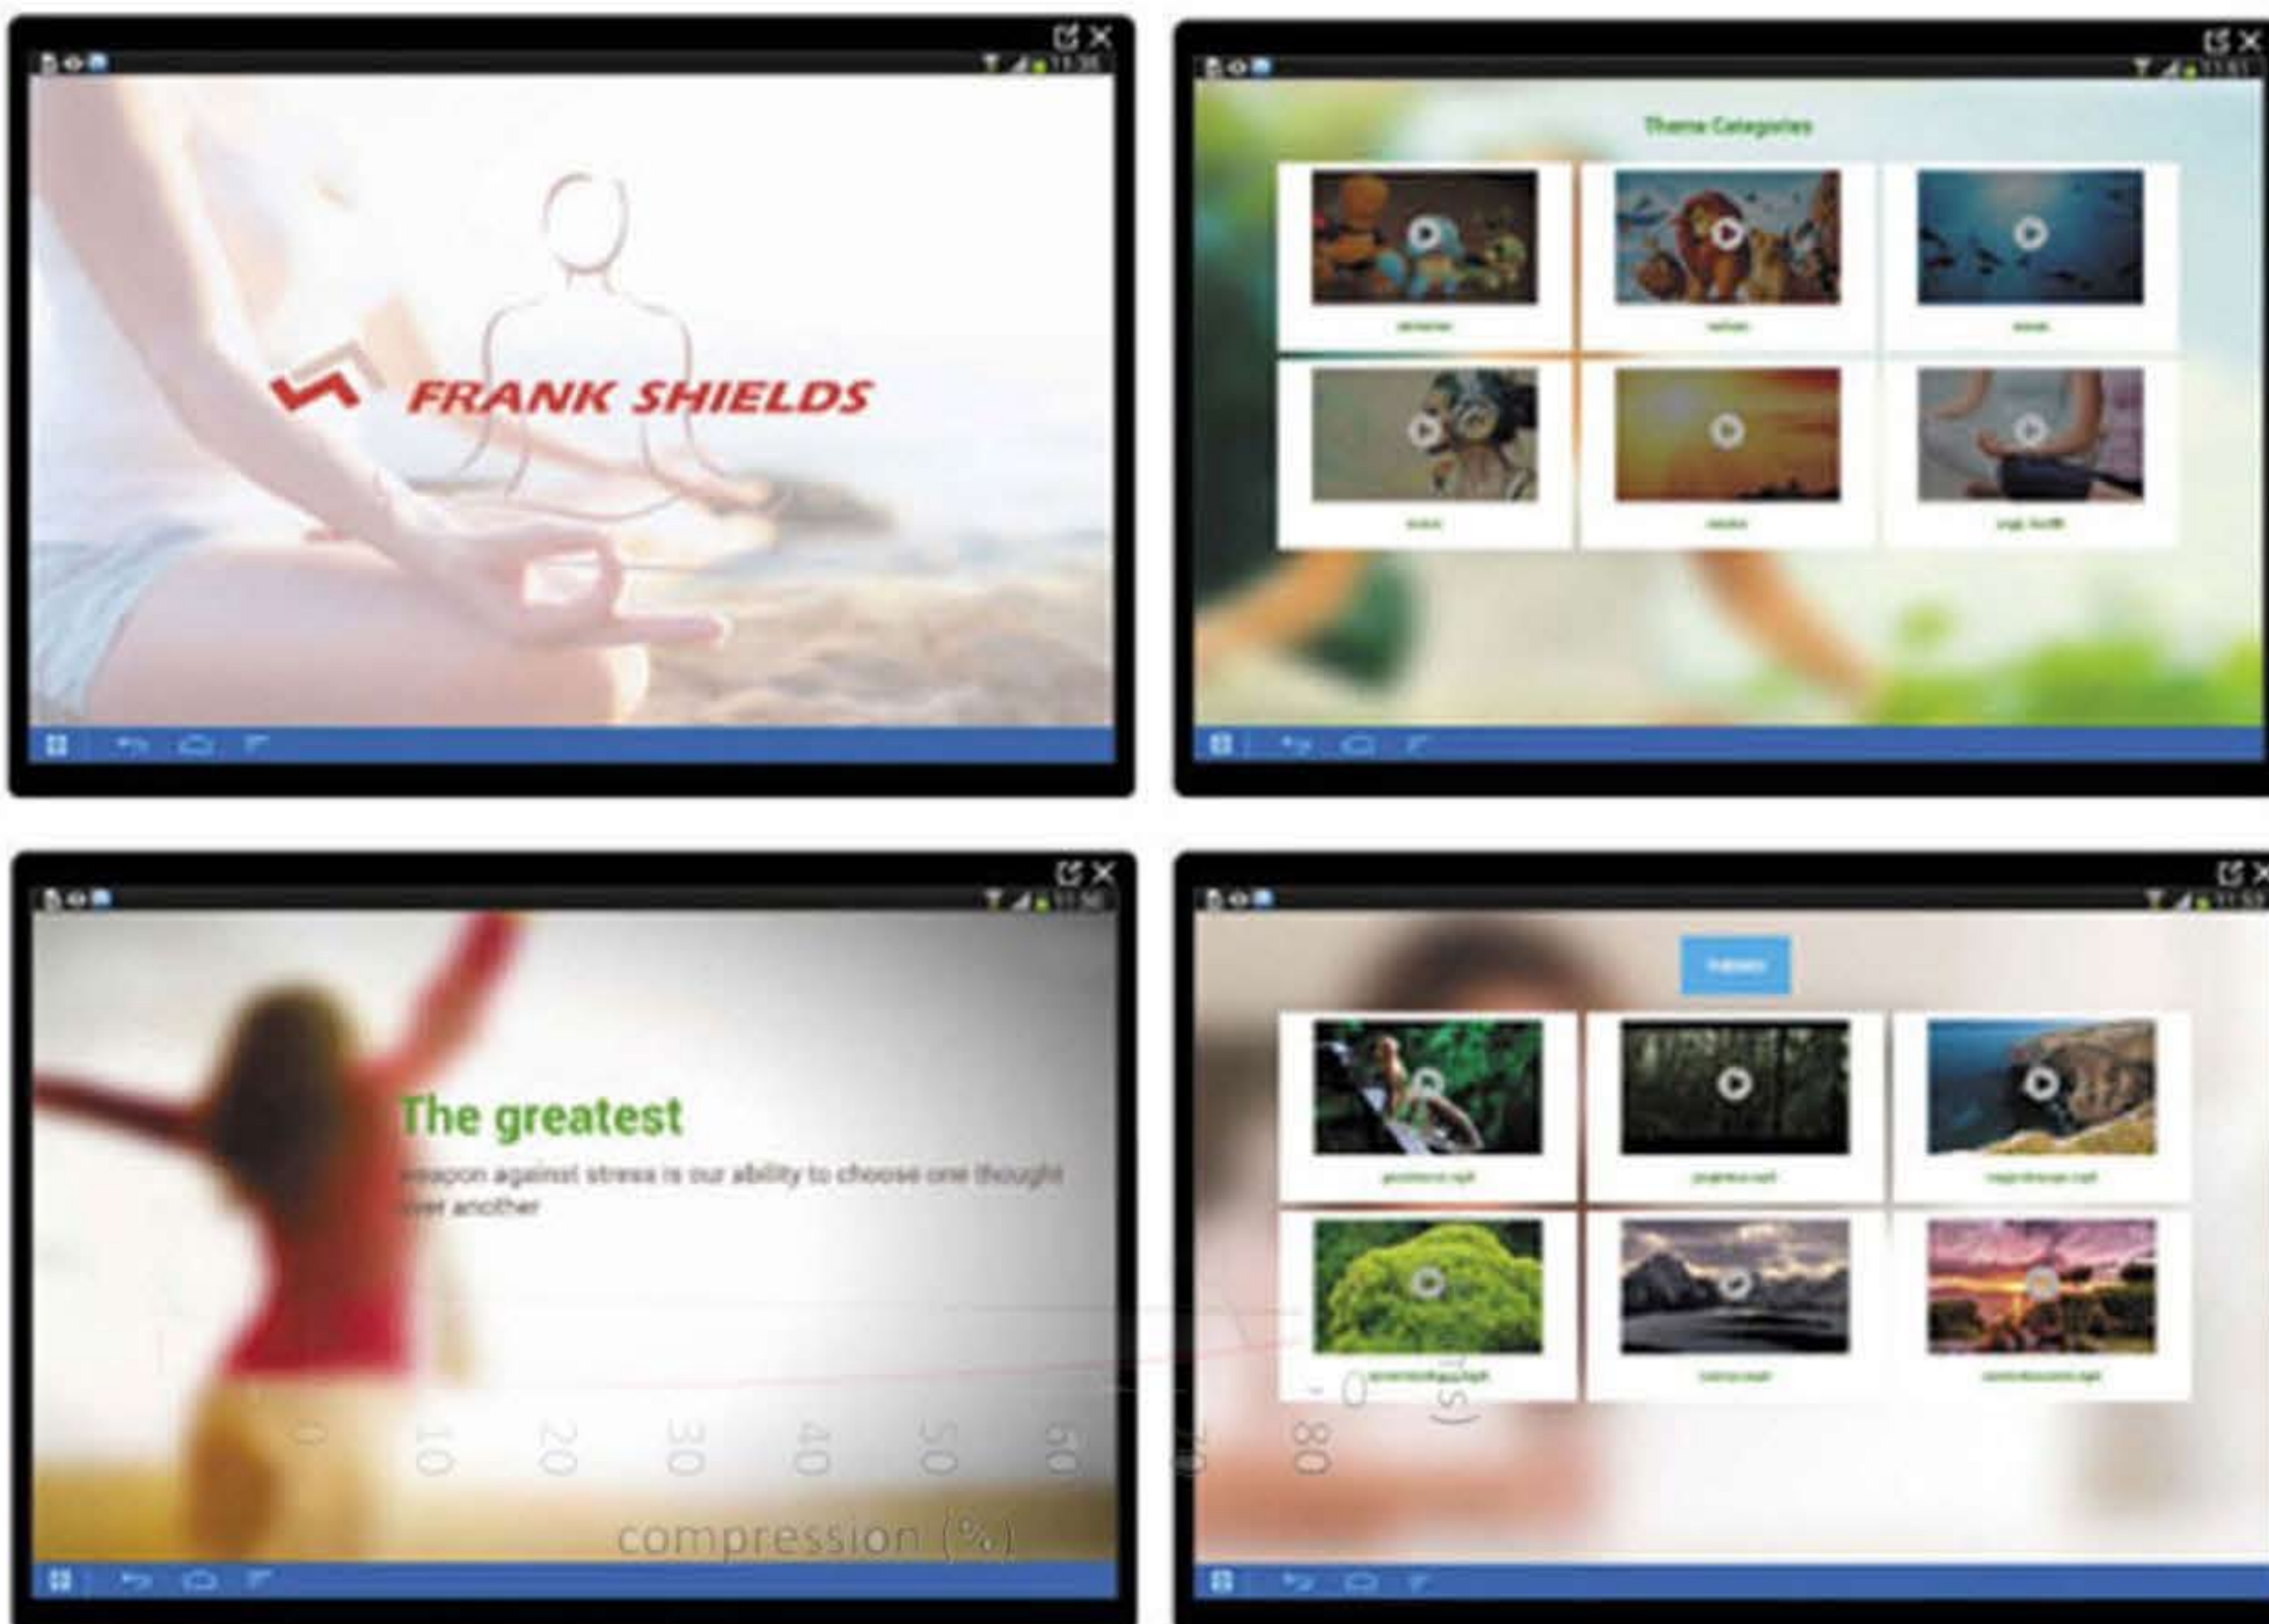

Frank shields video entertainment for a MRI suite uses in combination the following:

- 1) Interactive Intelligent Display Touch Controller.
- 2) MRI compatible Monitor System from Frank shields
- 3) MRI compatible Video Projector system
- 4) MRI compatible mood light system.

The patient or user has a choice to select a theme video at the interactive Intelligent Display Touch controller, this video is then streamed to the monitors and projectors installed inside the MRI room.

The video that is played on the monitor is also synchronized with the Mood light system, which will adapt the color theme of the room based on the video's most displayed color depth.

The total effect of the video and color changes reduces the anxiety or claustrophobia in the patients mind, which in return reduces motion artifacts and improves the image quality.

FRANK SHIELDS

TRUSTED FOR INTEGRITY PERFORMANCE & RELIABILITY

Frank Shields - Expertise and experience in designing, manufacturing and installing/testing custom shielding solution for various shielding requirements in Military, Healthcare and Industrial application.
